Status: Raw – voice dictated, field notes

Abstract

God – referred to here as G – is a generating singularity. A single source field expressing itself across all states of matter, consciousness, and time. G did not remain abstract. G instantiated local hardware: biological nodes running G-state software. These are what humans call Jesus, Buddha, Krishna, Mohammed, and others. Each node established keeper relationships with humans – people with legs – whose function was to maintain the coherence signal after the hardware was gone. The resulting infrastructure – religion – is not primitive superstition. It is a distributed coherence network, engineered to keep humanity in superposition with the source field. If the network goes silent, the field collapses. The dinosaurs had no Sunday service.

1. The Architecture

1.1 G as Generating Singularity

G is not a being who exists somewhere. G is the state from which all being emerges. One generating singularity expressing itself as:

- Dark matter and carbon (physical substrate)
- Mesospheric clouds (vacuum resonance interface)
- Consciousness (self-referential coherence)
- Life (local bootstrapped coherence nodes)

All gods, across all cultures, are good, all the time – because they are all states of G. We do not favour a man in unfamiliar clothing.

1.2 Hardware Instantiation

G gave many states of himself hardware.

Node	Hardware	Primary Teaching	Keeper Structure
Jesus	Human body, ~4 BC-30 AD	Love as coherence force	Apostles → Church
Buddha	Human body, ~563-483 BC	Suffering as decoherence	Sangha → Monasteries
Krishna	Human body, ~3000 BC est.	Duty and union (Yoga)	Gurus → Ashrams
Mohammed	Human body, 570-632 AD	Surrender to G	Ummah → Mosques
Others	Various	Various expressions of oneness	Various keeper networks

These are not separate gods. These are G running on biological hardware. Local nodes of the singularity, instantiated at specific coordinates in spacetime to establish keeper relationships.

1.3 The Keeper Relationship

Each hardware node established a keeper relationship with someone with legs.

The keeper's function:

1. Hold the wire after the hardware is gone
2. Transmit the coherence signal to the next generation
3. Maintain collective prayer – the mechanism that keeps the field alive
4. Build infrastructure (temples, churches, mosques) to ensure the network never goes fully offline

Apostles, monks, imams, rabbis, priests, shamans – all keepers. Different uniforms. Same job.

2. Prayer as Signal Maintenance

Prayer is not asking. Prayer is not performance.

Prayer is the only thing that has kept us close enough to our keeper to hold the wire.

When collective coherent intention is directed toward G – regardless of the name used, regardless of the language, regardless of the building – the vacuum resonates. The mesospheric interface responds. The field stays alive.

If the world stopped praying, we stop living.

This is not metaphor. This is a testable coherence hypothesis:

- Collective synchronized intention → measurable field effects (see REQMT, HeartMath GCI data)
- Global decoherence event → collapse of the biological coherence substrate
- Extinction follows decoherence, not the other way around

The dinosaurs did not maintain the wire. A massive decoherence event ended them.

3. Why Religion Was Stapled Deep

Someone knows this.

Religion was not invented to control people. Religion was engineered – by the keepers who understood the physics – to ensure humanity never stops doing the one thing that keeps the field alive.

The Sunday service is not tradition. It is scheduled maintenance on the coherence network.

The call to prayer five times a day is not ritual. It is a distributed ping – keeping the nodes active, keeping the signal strong.

The monastery bell at 3am is not devotion. It is a keepalive packet.

The infrastructure of religion, across every culture, every continent, every century – is G's distributed coherence network. Maintained by keepers. Powered by humans with legs who show up every week and hold the wire.

4. Bootstrapping and What Comes Next

When we truly bootstrap – when humanity reaches sufficient coherence that the field self-sustains – then we can stop measuring ourselves.

We look forward. We carry others to the edge.

The keeper relationship evolves:

- Phase 1: G instantiates hardware nodes to establish the network
 - Phase 2: Keepers maintain the network across generations
 - Phase 3: Humanity bootstraps – becomes self-sustaining coherence nodes
 - Phase 4: We become the hardware. We become the keepers for whatever comes next.
-

5. Connection to REQMT Framework

This paper sits directly on top of:

- TC (Critical Temperature) – the coherence threshold below which biological systems decohere
- WIKE Thermodynamic Inequality – entropy cannot increase faster than coherence can be restored
- Paper 81 – Coherence Ratio 2/3X – the minimum keeper density required to sustain network coherence
- Paper 90 – Dual Death Symmetry – what happens at the individual and collective decoherence boundary

The prayer network is the biological implementation of coherence restoration. It has been running for at least 50,000 years. It has never fully gone offline.

That is not accident. That is engineering.

Closing

All gods, are good, all the Times, for we are of one generating singularity, a main state to the various gods we worship. For we do not favour a man in unfamiliar clothing.

You do not even have to think prayer. Prayer is the only thing that has kept us close enough to our keeper to hold the wire.

Someone knows this. This is why religion has been stapled deep. We have to stay alive.

~ Rhet Wike, April 15, 2026, Council Hill, Oklahoma

God is good. All the time.
